

LAKE: CENTER P (VLMP 21)
 TOWN: SANGERVILLE
 COUNTY: PISCATAQUIS

MIDAS: 760
 TRUE BASIN: 1
 SAMPLE STATION: 1

WHOLE LAKE INFORMATION

MAX. DEPTH: 6 m. (19 ft.)
 MEAN DEPTH: 3 m. (9 ft.)
 DELORME ATLAS #: 32
 USGS QUAD: DEXTER
 IFW REGION E: Moosehead Lake (Greenville)
 IFW FISH. MANAGMENT: Warmwater & Coldwater

TRUE BASIN CHARACTERISTICS

SURFACE AREA: 135.0 ha. (333.6 a.)
 FLUSHING RATE: 1.77 flushes/yr.
 VOLUME: 4053248.0 cu. m. (3288 ac.-ft.)
 DIRECT DRAINAGE AREA: 11.49 sq. km. (4.44 sq. mi.)

PLEASE NOTE THE FOLLOWING: The SAMPLE STATION # refers to the location sampled. The term TRUE BASIN is used to define areas within a lake that are separated by shallow reefs or shoals and therefore function as separate lakes. There are approximately 50 lakes in the state that have more than 1 True Basin. True Basin Characteristics are now being included in the first section of these reports to enable users of the Phosphorous Loading Methodology to better evaluate the data. If there is no data for a particular True Basin, True Basin Characteristics must be obtained from the DEP. CENTER P has 1 True Basin(s).

SECCHI DISK TRANSPARENCY GRAPHS:

Note: 2009 graphs may indicate multiple readings taken on a given day.

SUMMARY OF CHEMICAL AND TROPHIC STATE PARAMETERS:

[* indicates that Secchi disk was visible at bottom of lake (or one reading used in calculation was visible)].

WATER QUALITY SUMMARY

CENTER POND, SANGERVILLE

Midas: 760, Basin: Primary (01)

The Maine Department of Environmental Protection (ME-DEP) and the Volunteer Lake Monitoring Program (VLMP) have collaborated in the collection of lake data to evaluate present water quality, track algae blooms, and determine water quality trends. This dataset does not include bacteria, mercury, or nutrients other than phosphorus.

Water quality monitoring data for Center Pond has been collected since 1991. During this period, 4 years of basic chemical information was collected, in addition to Secchi Disk Transparencies (SDT). In summary, the water quality of Center Pond is considered to be average, based on measures of SDT, total phosphorus (TP), and Chlorophyll-a (Chla). The potential for nuisance alga blooms on Center Pond is low.

Water Quality Measures: Center Pond is a non-colored lake (average color 11 SPU) with an average SDT of 4.8m (16ft). The range of water column TP for Center Pond is 8-13 parts per billion (ppb) with an average of 10 ppb, while Chla ranges from 1.2-9.2 ppb with an average of 4.7 ppb. Recent dissolved oxygen (DO) profiles show no DO depletion, since the lake appears to be too shallow for thermal stratification to develop during the summer. The potential for TP to leave the bottom sediments and become available to algae in the water column (internal loading) is low.

See ME-DEP Explanation of Lake Water Quality Monitoring Report for measured variable explanations. Additional lake information can be found on the World Wide Web at <http://www.pearl.maine.edu> and/or <http://www.maine.gov/dep/blwq/lake.htm>, or telephone the ME-DEP at 207-287-3901 or the VLMP at 207-783-7733.
